Pharmaceutical composition for treating tumor by stimulating cytotoxic activity of natural killer cell or T-cell, comprises an agent that binds to mast cell function-associated antigen ligand on target cell.

Example 1; Page 19; 49pp; English.

The present invention relates to a pharmaceutical composition comprising an agent which specifically binds to a mast cell function associated antigen (WAFA) ligand on a target cell, and prevents or inhibits natural killer (NK) - or T-cell-expressed cell surface MAFA from binding to MAFA ligand and a pharmaceutically acceptable excipient. The invention is useful for inhibiting an NK- or a T-cell-expressed cell surface MAFA binding to a ligand on a target cell, by contacting the pharmaceutical

composition in vitro, ex vivo or in vivo by administering the composition to the subject, to NK or T-cell or the target cell e.g. tumour cell, in an amount sufficient to inhibit cell surface MAFA binding to the ligand on the target cell. The agent or the composition is useful for treating a tumour by stimulating the cytotoxic activity of an NK cell or a cytotoxic treating a T-cell (CTL), where the tumour comprises an NK cell- or CTL-susceptible tumour cell. The invention is also useful for inhibiting an activity of NK cell or a T-cell. The present sequence is mouse MAFA protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This is the amino acid sequence of rat mast cell function-associated antigen (MAFA), a type II membrane glycoprotein found on mast cells and basophils. The invention relates to cloning of the human MAFA molecule (see AAW82265) and to the discovery of splice variants (see AAW88266-67) of human MAFA that are not found in rat. Polypeptides and synthetic
combination with the MAFA to prevent inflammatory and allergic reactions

The invention is useful for inhibiting an NK- or a T-cell-expressed cell surface MAFA binding to a ligand on a target cell, by contacting the pharmaceutical composition in vitro, ex vivo or in vivo by administering the composition

ö
to the subject, to NK or T-cell or the target cell e.g. tumour cell, in an amount sufficient to inhibit cell surface NARA binding to the ligand on the target cell. The agent or the composition is useful for treating tumour by stimulating the cytotoxic activity of an NK cell or a cytotoxic received by stimulating the cytotoxic activity of an NK cell or a cytotoxic tumour cell. The invention is also useful for inhibiting an activity of NK cell or a T-cell. The present sequence is rat MAFA protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Binding domain; immunoglobulin; fusion protein; cytostatic;

```

Partial sequence of mast cell function-associated antigen (MAFA).

```
comprising a binding domain polypeptide that is fused to an immunoglobulin hinge region polypeptide, an immunoglobulin havy chain CH2 constant region polypeptide that is fused to the hinge region polypeptide that is fused to the hinge region polypeptide that is fused to the CH2 constant region polypeptide that is fused to the CH2 constant region polypeptide comprises: a wild-type human IgG1 immunoglobulin hinge region polypeptide, a mutated human IgG1 immunoglobulin hinge region polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide contains 2 cysteine residues, where the first cysteine is not mutated; a mutated human IgG1 immunoglobulin hinge region polypeptide contains of mutated human IgG1 immunoglobulin hinge region polypeptide contains no more than one cysteine residues, where the mutated human IgG1 immunoglobulin hinge region polypeptide contains no more than one polypeptide, derived from (a) having 3 or more cysteine residues; where the mutated human IgG1 immunoglobulin hinge region polypeptide contains the mutated human IgG1 immunoglobulin hinge region polypeptide contains on cysteine residues. The binding domain-immunoglobulin fusion protein is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     pharmaceutical composition comprising the binding domain-immunoglobulin fusion protein, a pharmaceutical composition comprising the binding domain-immunoglobulin fusion protein or polynucleotide and a carrier, and treating a subject having or suspected of having a malignant condition or a B-cell disorder. The binding domain-immunoglobulin fusion protein is useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, carcinoma or sarcoma, rheumatoid arthritis, myasthenia gravis, Grave's disease, type I diabetes mellitus, multiple solerosis or autoimmune disease. The present sequence is a binding domain-immunoglobulin fusion protein-associated protein sequence. Note: The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 CCGSKDSTCSHCPSCPILWTRNGSHCYYFSMEKKDWNSSLKFCADKGSHLLTFPDNQGVK 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 CQGSNYSTCASCPSCPDRWMKYGNHCYYPSVEEKDWNSSLEFCLARDSHLLVITDNQEMS 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 capable of at least one immunological activity comprising antibody dependent cell-mediated cytocoxicity (ADCC) and complement fixation. The binding domain polypeptide is capable of specifically binding to an antigen. Also included are an isolated polynucleotide encoding the binding domain-immunoglobulin fusion protein, a recombinant expression construct comprising the polynucleotide (operably linked to a promoter), a host cell transformed or transfected with a recombinant expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and is also available in electronic format directly from USPTO at seqdata uspto.gov/sequence.html?DocID=20030118592. The authors have not identified the sequences in the printed specification by their SEQ ID number therefore none of the sequences can be explicitly identified.
                      invention relates to a binding domain-immunoglobulin fusion protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -immunoglobulin fusion protein-associated protein sequence. Note: The sequence data for this patent formed part of the printed specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 MADSSIYSTLELPEAPQVQDESRWKLKAVLHRPHLSRFAMVALGLLTVILMSLLMYQRIL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 189;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DB 7;

                      Mast cell function-associated antigen; MAFA; soluble; ligand; identification; screening; inflammation; inflammatory; allergic;
                                                                                                                                                                                                                                                                                                                                                                                                      A soluble form of mast cell function-associated antigen (MAFA) can be produced by recombinant techniques for use in the ligand-screening assay. The ligands that are identified may be used alone or in combination with the MAFA to prevent inflammatory and allergic reactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 CPNLWMRNGSHCYYFSMEKRDWNSSLKFCADKGSHLLTFPDNQGVNLFQEYVGEDFYWIG 60
                                                                                                                                                                                                                                                                                                                     Novel DNA encoding a mast cell function-associated antigen (MAFA) - useful for screening for ligands of MAFA which are useful for prevention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Mast cell function-associated antigen; MAFA; splice variant; human; inflammation; allergy; asthma; rheumatoid arthritis; tumour; therapy.

                                                                                                                                                                                                                                                                                                This is the amino acid sequence of human mast cell function- associated antigen (MAFA), a type II membrane glycoprotein. cDNA (see AAV84198) encoding human MAFA can be obtained from myelogenous leukaemic cell line KU812 or cDNA derived from human lung tissue. The encoded protein is similar to the rat form (see AAW88277) having an intracellular domain containing a putative immunoreceptor tyrosine activation motif (TIMM) and an extracellular lectin-like domain. 2 Alternatively spliced forms (see Synthetic peptides (see AAW88258-64) based on these truncated MAFA proteins can be used in methods for the treatment of inflammatory and allergic diseases, and tumour growth
                                                                                                                                                                                                                     New polypeptide having a sequence corresponding to human mast cell function-associated antipen - useful in forming and manufacturing pharmaceutical compositions in the treatment of inflammatory and allergic diseases, and tumour growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 CQGSNYSTCASCPSCPDRWMKYGNHCYYFSVEEKDWNSSLEFCLARDSHLV1TDNQEMS 120

The present invention relates to a pharmaceutical composition comprising an agent which specifically binds to a mast cell function associated an attent (MK) - or T-cell-expressed cell; and prevents or inhibits natural killer (MK) - or T-cell-expressed cell surface MAPA from binding to MAPA ligand and a pharmaceutically acceptable excipient. The invention is useful for inhibiting an NK- or a T-cell-expressed cell surface MAPA composition in vitro, ex vivo or in vivo by administering the pharmaceutical composition in vitro, ex vivo or in vivo by administering the composition to the subject, to NK or T-cell or the target cell e.g. tumour cell, in a manount sufficient to inhibit cell surface MAPA binding to the ligand on the target cell. The agent or the composition is useful for treating a tumour by stimulating the cytotoxic activity of an NK cell or a cytotoxic tumour cell. The invention is also useful for inhibiting an activity of NK cell or a T-cell. The present sequence is human MAPA protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 CQGSNYSTCASCPSCPDKWMKYGNHCYYFSVEKKDWNSSLEFCLARDSHLLVITDNOEMS 120

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGK) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (I) and its binding partners are useful in medical imaging of sites expressing (II) (II) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations are responsible for general social social sequences have applications and polynersity are assessed as a product of a session of mutations and polyneric diagnostics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 71 HCPSCPILWTRNGSHCYYFSMEKKDWNSSLKFCADKGSHLLTFPDNQGVKLFGEYLGQDF 130

Mast cell function-associated antigen; MAFA; huMAFA(E3/4-);

splice variant; human; inflammation; allergy; asthma; rheumatoid arthritis; tumour; therapy.

Homo sapiens WO9854209-A2

```
The invention relates to a novel isolated polypeptide, designated NOVX (NOV1 - 13), consisting of a mature form of one of 61 sequences, given in the variant differ from the mature form, provided that the variant differs in the variant differ from the mature form, provided that the variant differs in the variant differ from the mature form, provided that the variant differs in the ward of the mature form, provided that the variant differs in the mature form. The NOVX polypeptides, are useful for treating a syndrome associated with a human disease (NOVX-associated disorder in humans and for treating a syndrome associated with a human disease (NOVX-associated disorder). NOVX polypeptides and the modifier acids, are useful for determining the presence of or predisposition to a disease associated with altered levels of NOVX predisposition to a disease associated with altered levels of NOVX predisposition to a disease associated with altered levels of NOVX collapseptide as also useful for identifying an agent that binds to NOVX and a cell expressing NOVX is useful for identifying an agent that binds to NOVX collapseptide having 95 % sequence identity to NOVX polypeptide are useful for teating or not predisposed to the disease. NOVX collapseptides are useful for teating or preventing disorders are also useful for determining the presence or amount of NOVX in a sample. NOVX collypeptides are useful for treating or preventing disorders or syndromes including trauma, viral, bacterial, fungal, protectoral, and parabiler infections. They can also treat disorders such as e.g., Alzheimer's infections they can also treated disorders such as e.g., Alzheimer's collypeptides are useful for treating or preventing disorders are also useful for identifying and/or coloning NOVX monologues in other cell represence or a stroke. The NOVX encounts of NOVX sequences are also useful for identifying and/or coloning now prove the sequence of an indentifying and/or cloning NOVX monologues in other cells or produced and modulating NOVX activi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      studying the function and/or activity of NOVX protein and for identifying and/or evaluating modulators of NOVX protein activity. The NOVX nucleic acids can be used in gene therapy. This sequence represents a NOVX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                acids can be used in gene therapy. This sequence represents a NOVX protein of the invention

Recombinant cells containing expression vectors comprising the CTL-1
coding sequence can be used to produce recombinant CTL-1 which is useful
for traising Ab and to screen for specific binding agents. Binding agents
which are antagonists of CTL-1 can be used to treat or prevent cancer,
e.g. of ovary, paraganglion, penis, brain, thyroid and heart which are
associated with overexpression of CTL-1. Fragments of this sequence are
used to diagnose these conditions, as probes or primers in usual
hybridisation and/or amplification assays, or for gene mapping, while
complements of this sequence, antisense or ribozyme sequences are used to
treat or prevent the aforementioned cancers also. Ab are used directly as
antagonists or for delivery of therapeutic agents to cells that express
CTL-1. CTL-1 includes a carbohydrate-recognition domain (aa35-149) and
also a transmembrane domain, but no secretory signal. CTL-1 also shows
homology with human CD69 (AAM85593), and mouse CD69 (AAM85595) proteins.

                                                                                                                                                                                                                                                                                                              This sequence represents a novel human natural killer (NK) cell surface antigen, Kp43. This sequence can be used in a method resulting in the production of recombinant protein expressed by NK and T cells, which may inhibit cell-mediated cytotoxidity, e.g. in transplant rejection or autoimmune diseases, or may be used to produce antibodies for diagnostic

The invention relates to a composition comprising several CDNAs that are differentially expressed in a liver disorder. The composition is useful for treating liver disorder such as hyperlipidaemia, hypertension, type for treating liver disorder such as hyperlipidaemia, hypertension, type compounds to identify a ligand which specifically binds a CDNA. A protein encoded by the CDNA is useful for a high-throughput method for using a protein to screen several molecules or compounds to identify a ligand which specifically binds the compounds to identify at least one ligand which specifically binds the protein which involves combining the protein encoded by the CDNA with several of molecules or compounds under conditions to allow specific binding, and detecting specific binding between the protein and a compound, therefore identifying a ligand which specifically binds the protein. The composition is useful for detecting and composition is useful for detecting and composition is useful for detecting and composition is useful for detecting and composition is useful for detecting and composition is useful for detecting and composition is useful for detecting and composition is useful for detecting and composition is useful for detecting and composition is useful for detecting and composition is useful for detecting and composition is useful for detecting and composition and composition is useful for detecting and composition and composition is useful for detecting and composition and composition and a composition and a push and a composition encoded by a cDNA differentially expressed in a

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

hepatic lectin 2 - rat
N;Alternate names: asialoglycoprotein receptor RHL-2/3 (ASGP-R2/3)
C;Species: Rattus norregicus (Norway rat)
C;Species: Rattus norregicus (Norway rat)
C;Accession: B28462; A28462; A31601; A26888; A25417
R;Halberg, D.F.; Wager, R.E.; Farrell, D.C.; Hildreth IV, J.; Quesenberry, M.S.; Loeb, A J. Biol. Chem. 262, 9938, 1987
A;Title: Major and minor forms of the rat liver asialoglycoprotein receptor are independence number: A28462; MUID:87250656; PMID:3597443
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A; Residues: 1-152,'A',154-201,'I',203-259,'C',261-301 <MCP>

Asialoglycoprotein receptor - mouse
NiAlternate names: hepatic lection
NiAlternate names: hepatic lection
NiAlternate names: hepatic lection
CjSpecies: Mus musculus (house mouse)
CjSpecies: Mus musculus (house mouse)
CjAccession: S13165
R;Sanford, J.P.; Doyle, D.
Biochim. Biophys. Acta 1087, 259-261, 1990
A;Title: Mouse asialoglycoprotein receptor cDNA sequence: conservation of receptor gene A;Reference number: S13165; MUID:91027942; PMID:2223888
A;Molecule type: mRNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Rigiorda, R.; Rudert, W.A.; Vavassori, C.; Chambers, W.H.; Hiserodt, J.C.; Trucco, Science 249, 1298-1300, 1398-1308 Astribe: NRR-Pl, a signal transduction molecule on natural killer cells.
